

4 Way Forward

- 4.1.1 Through a series of PE activities in Stage 3 PE, comments and concerns from the public and relevant stakeholders on the relocation project were collected and solicited. In general, majority of the stakeholders of the community were in favour of the relocation project.
- 4.1.2 In Stage 3 PE, in order to address a number of concerns raised during the previous PE from different stakeholders, preliminary findings of the Environmental Impact Assessment, possible facilities to be proposed outside the caverns, location of temporary explosive magazine, location of ventilation shaft and portals, traffic impact mitigation measures, odour management measures were presented to and discussed with the community. Based on the above information, different stakeholders provided various comments and suggestions to the project.
- 4.1.3 Comments and opinions received in the Stage 3 PE would serve as an important basis for formulating the recommended detailed design and the proposed mitigation measures, which would be promulgated for public discussion and under upcoming Public Engagement/ Consultation activities to suit the project implementation.
